Survey of School Buildings with Older T-12 Fluorescent Lighting Fixtures

Posted March 3, 2014

Polychlorinated biphenyls (PCBs) were legally used between 1950 and 1978 in lighting fixtures and other building materials. In 1978, the federal government banned the continued use of PCBs (polychlorinated biphenyls), but until recently, has provided little guidance regarding how municipalities should address PCB-containing materials in existing buildings.

On November 29, 2010, the New York City Department of Education ("DOE") completed a system-wide survey to identify T-12 lighting fixtures which potentially contain ballasts with PCBs. The survey results originally reported that the total number of buildings potentially containing PCB ballasts was 772.

The DOE conducted supplemental survey activities and determined, as of June 22, 2011, that the total number of buildings potentially containing PCB ballasts was 754. The overall reduction stems from the identification of buildings that (i) do not actually contain T-12 fixtures (ii) were confirmed as being constructed after 1978, or (iii) both. In addition, the supplemental information has identified additional buildings that may have PCBs where the original survey did not identify T-12 fixtures.

The list is subject to change as more buildings are removed and/or added as a result of more detailed reviews.

As of March 3, 2014, the total number of buildings potentially containing PCB ballasts is 541 and reflected in the list below. This excludes buildings in which all PCB-containing light fixtures have been replaced. A separate list of buildings with PCB ballasts that have since been replaced can be found here: http://www.nycsca.org/Community/Programs/EPA-NYC-PCB/PCBDocs/CompletedLightingFixtureReplacements.pdf

T-12 Fixtures by Buildings as of 03-03-14
